CEL-FI GO MOBILE REPEATER, TELSTRA

Boost your connectivity with this kit, including 5G antenna plus Wi-Fi repeaters, in both the vehicle cabin and the service body.

Features & Benefits:

- Cel-fi Go is a mobile repeater unit designed to solve cellular coverage issues, it works by receiving the network signal, amplifying it and then re-transmitting it within the vicinity of your vehicle. Your device then obtains the boosted signal to improve voice and internet connectivity. The unit is ideal for those working in rural or outback areas where there is normally no or limited coverage
- Cel-fi GO Smart Signal Booster (1) - this is the main repeater unit that is mounted inside the vehicle cab generally out of the way, under a seat etc. the donor antenna connects to one side and the server antenna to the other boosting the connection in the process
- Multi-band Panel Antenna 5dbi (2) - this is a low profile directional antenna that eliminates the need to purchase different antennas for each frequency, this can be wall mounted and is generally installed to the internal headboard of the service body
- Cellular Aerial Donor Antenna 6.5dbi (3) - this is a mobile antenna with great consistency in gain, coverage pattern and bandwidth, the donor antenna is required to connect to the existing network signal and is mounted to ute bullbar or truck side mirror, depending on the vehicle
- T7 Patch Server Antenna 3dbi(4) - this is a Internal Glass Mount Patch Antenna that creates a larger coverage area, it is a compact solution to improve signal, the server antenna is generally mounted where the service is required in the vehicle cab often fitted to the rear windscreen glass with adhesive backing

- Note that the Cel-fi Go Mobile Repeater is only compatible with Telstra networks

Details:

- ✔ Compatibility Ute, Truck
- ✔ Warranty 12 Month manufacturers warranty
